Benefits of Participating in a study.

Why should you volunteer?
By participating in a clinical trial with CNS, you may help in the development of new medical therapies. These therapies, if proven to be safe and effective, can help improve the quality of life by offering better treatments for people with life-threatening and chronic diseases.

What are the benefits of participating?
Clinical research studies offer volunteers physical exams, study related medical testing and study medication at no cost. Many studies offer compensation for your time and travel and transportation is provided if needed.

CNS is the leading clinical research site serving Southern California.

Who is CNS?
We are a leading clinical research center specializing in the design and conduct of clinical trials for new medications and treatments in mental heath, neurology, and general health conditions.

What is a clinical trial?
Clinical trials are carefully supervised research studies whereby new investigational treatments and medications are evaluated for safety and effectiveness by a medical team.
