Area Description:
Project area is located south of Unity, approximately 47 miles southwest of Baker City. The project area is 1,500 acres with approximately 50 net treatment acres (mostly in riparian areas). Whitetop is the target species, however there are thistles in the bottomlands. Medusahead is relatively sparse in the project area, so any isolated sites should be at least mapped by the contractor for future fall treatment. The project is located on private property (Mark Bennett) and will require that the contractor work closely with the landowner to coordinate treatment areas. Some of the project is difficult to access with ATV and will require a large amount of backpack spraying to access the sites in steep draws. Please fill out the hourly bid rate sheet attached if you are interested in this project.

Approved Herbicides:
Tri-County will provide all herbicides, surfactants, and dyes needed to complete this job.

Treatment Timing: May and June 2020

Budget: not to exceed $12,000

Contractor’s Responsibilities:
- Identification of whitetop, thistles, and medusahead
- Supplying all personnel and equipment necessary for the job to be completed.
- At least a 90% treatment (dead or blue) of all weeds identified within the project area.
- Provide all treatment records, invoice, track logs, point, and/or polys need to be submitted to Tri-County post treatment for approval prior to payment.
- Any photo points requested by Tri-County CWMA should be submitted within a timely manner following project completion.

Tri-County’s Responsibilities:
- Acquire landowner permission for entering property.
- Upload or send to contractor’s GPS all required points and track logs, along with any maps requested by contractor.
- Provide all herbicide, surfactant, and dye.
- Inspect project just prior to completion to allow the contractor to correct any missed plants before the contractor leaves the site.
- Contractor will be paid in full within 60 days of project completion approval by Tri-County staff.
