Brazed Plate Heat Exchangers/Evaporators are stainless steel brazed at all contact points, ensuring optimal heat transfer efficiency and pressure resistance. The plates are designed to achieve longest possible lifetimes. Since virtually all material is used for heat transfer, the Brazed Plate Heat Exchanger is very compact in size and has a low weight. The brazed plate heat exchangers ensure the customer the most cost-efficient solution for the process heat transfer duties.

- Low Maintenance
- Compact - smaller than other methods of heat exchange
- Exceptional Durability
- Superior Corrosion Resistance
- Higher Operating Pressures and temperatures
